308 EXCIMER SYSTEM

CAREVEAM

Innovative UVB phototherapy system for skin disease

Benefit

- Highly effective for various type of autoimmune and inflammatory dermatitis
- Safe and 100% pain-free treatment
- User friendly design and easy to operate
- Low acquisition and operating costs, maintenance free technology(no consumables)

Product description

Lameditech's innovative phototherapy system "CAREVEAM" is 308 excimer system for the treatment of various autoimmune and inflammatory skin disease, which is small, handy treatment solution intense monochromatic UVB phototherapy

Indications

- Vitiligo
- Psoriasis
- Eczema
- Atopic Dermatitis
- Alopecia Areata

Clinical case

Vitiligo case

Pre-treatment

After 3 Months

After 6 Months

Psoriasis case

Pre-treatment

After 3 Months

After 6 Months

Atopic dermatitis case

Pre-treatment

After 7 Months

Product Specification

Light source	XeCl Excimer Light	Display	4 Digit segment
Wavelength	308 nm ($\pm 0.1\%$)	AC power	220~230 V / 1A
Level	Level 1 ~ Level 5	Device weight	4 kg
Power density	10 ~ 30 mW/cm ²	Device size	300 x 250 x 210 mm
Single irradiation time	1 ~ 180 Sec	Spot size	21 x 45 mm

Company Profile

LAMEDITECH has been developing and supplying the specialized laser devices for the healthy and beautiful life of human and animal based on laser miniaturization technology.

Through the continuous research and development, LAMEDITECH commits to become a global top laser expertise company.
